Deliver 04

Overview

PowerToFly is a leading hiring platform with 10,000+ partner companies and millions of candidates, focused on connecting underrepresented talent with inclusive companies through job applications and virtual events.

My Role

As Staff Product Designer, I owned the funnel redesign end to end, from discovery to strategy to execution, collaborating with research, product, engineering, sourcing, events, data analysts, and executives.

Business Goals

More Job Applications

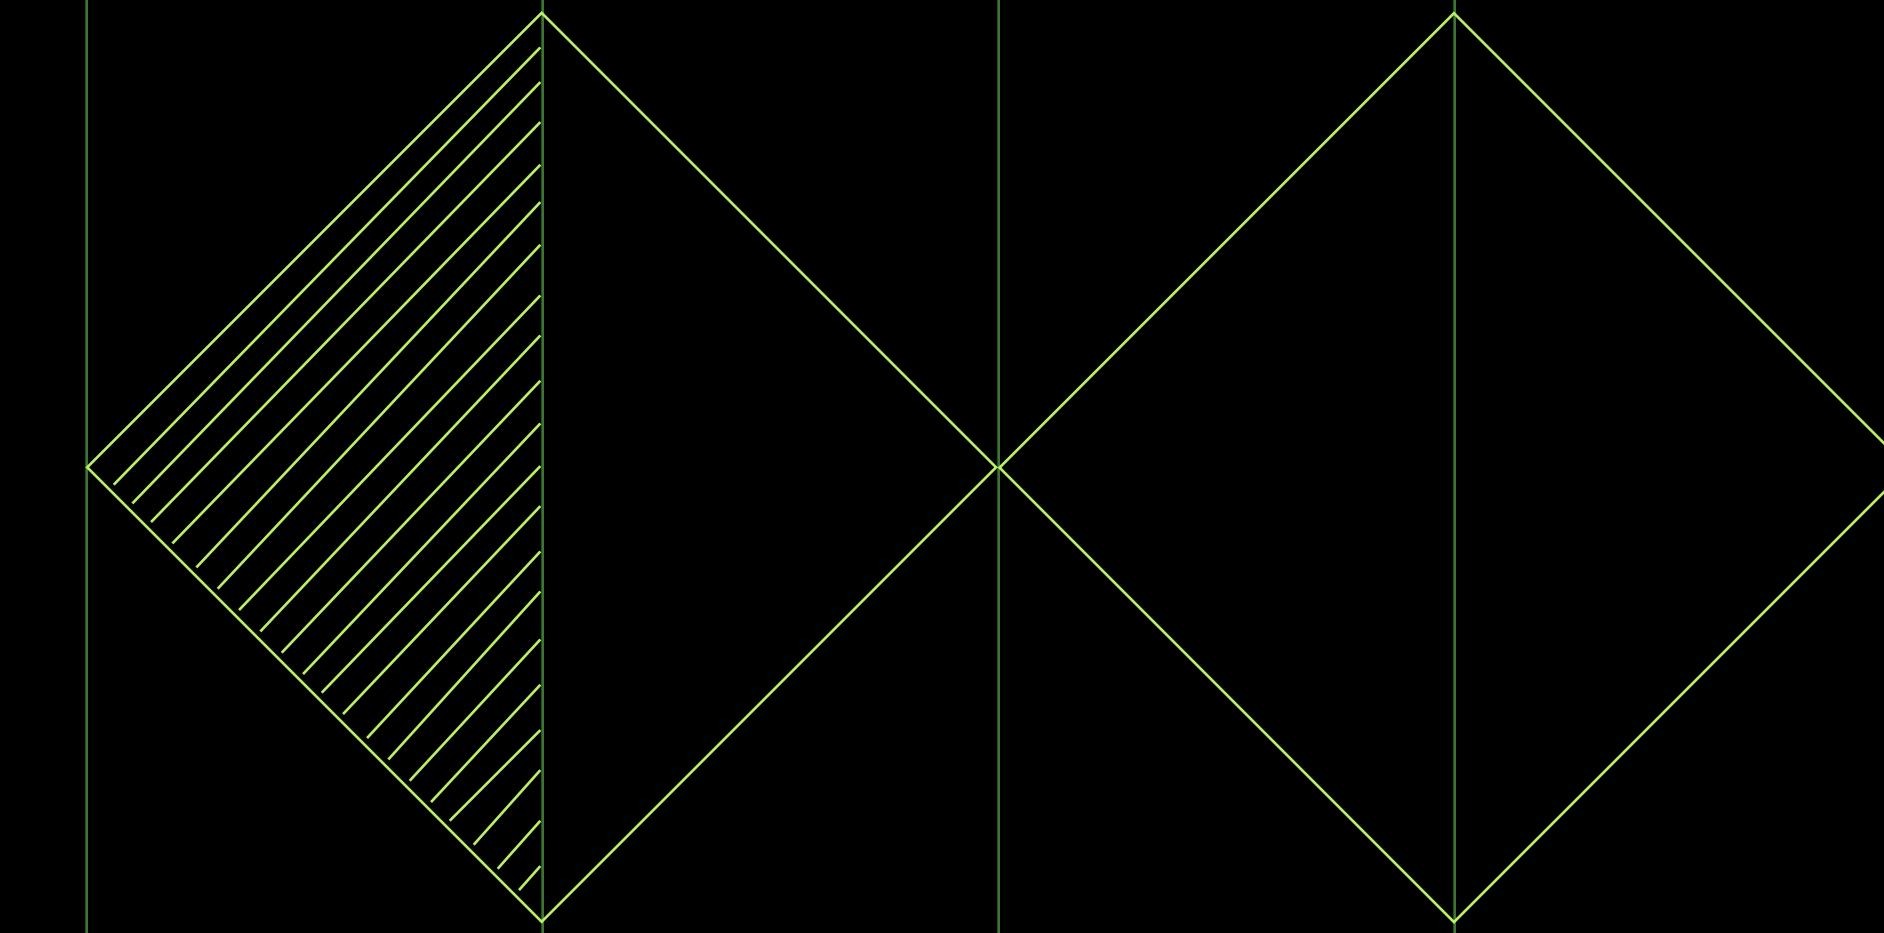

Increase job application completion rates in order to provide clients with a larger, more qualified pool of candidates to hire from.

DISCOVER

When I joined, past funnel decisions and user insights weren't documented. My discovery started with restoring funnel knowledge.

DISCOVER DEFINE DEVELOP DELIVER

#Key Insights From Candidates Interviews

I interviewed three active job seekers from our most recent virtual event. Each 30-minute session covered their daily struggles with job searching, followed by a live walkthrough of applying on our job board.

They were highly qualified, but struggling to get traction

For the first time in their careers, they were having a hard time putting their foot in the door.

“I’ve always landed roles, but now I can’t even get interviews.”

-Kim, Business

“Job searching feels like a second job I don't have time for.”

-Toncia, Finance

They were under daily pressure to find job

They needed to hit ~10 job applications a day while juggling jobs they weren't happy in, childcare, or unemployment.

They had a hard time creating a profile before applying

They were annoyed by the whole experience and weren't sure what value having a profile would bring to them.

“I would normally skip a step like this and come back to it later.”

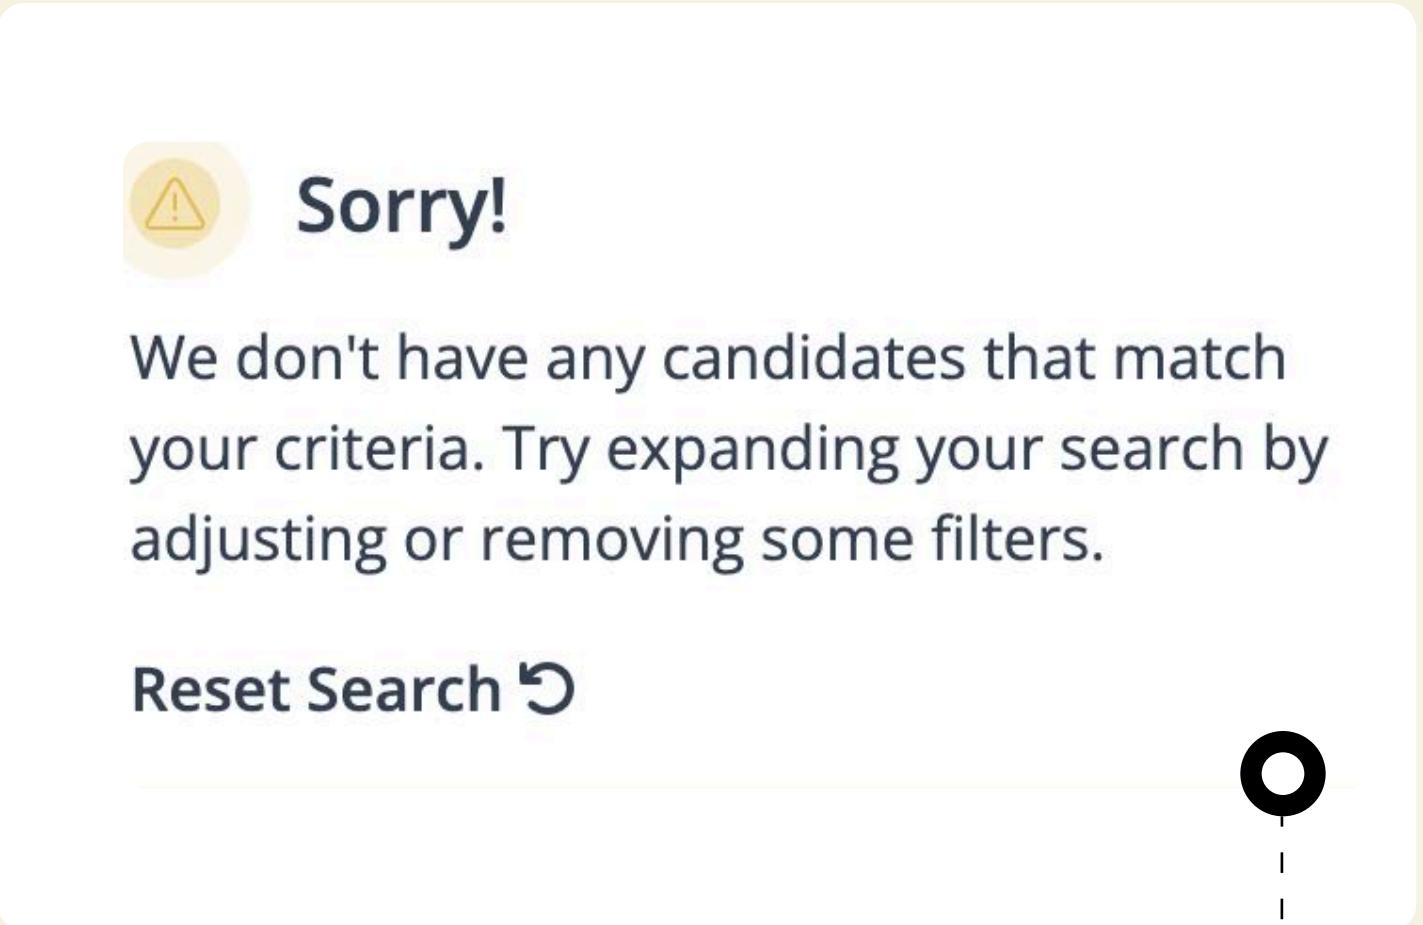

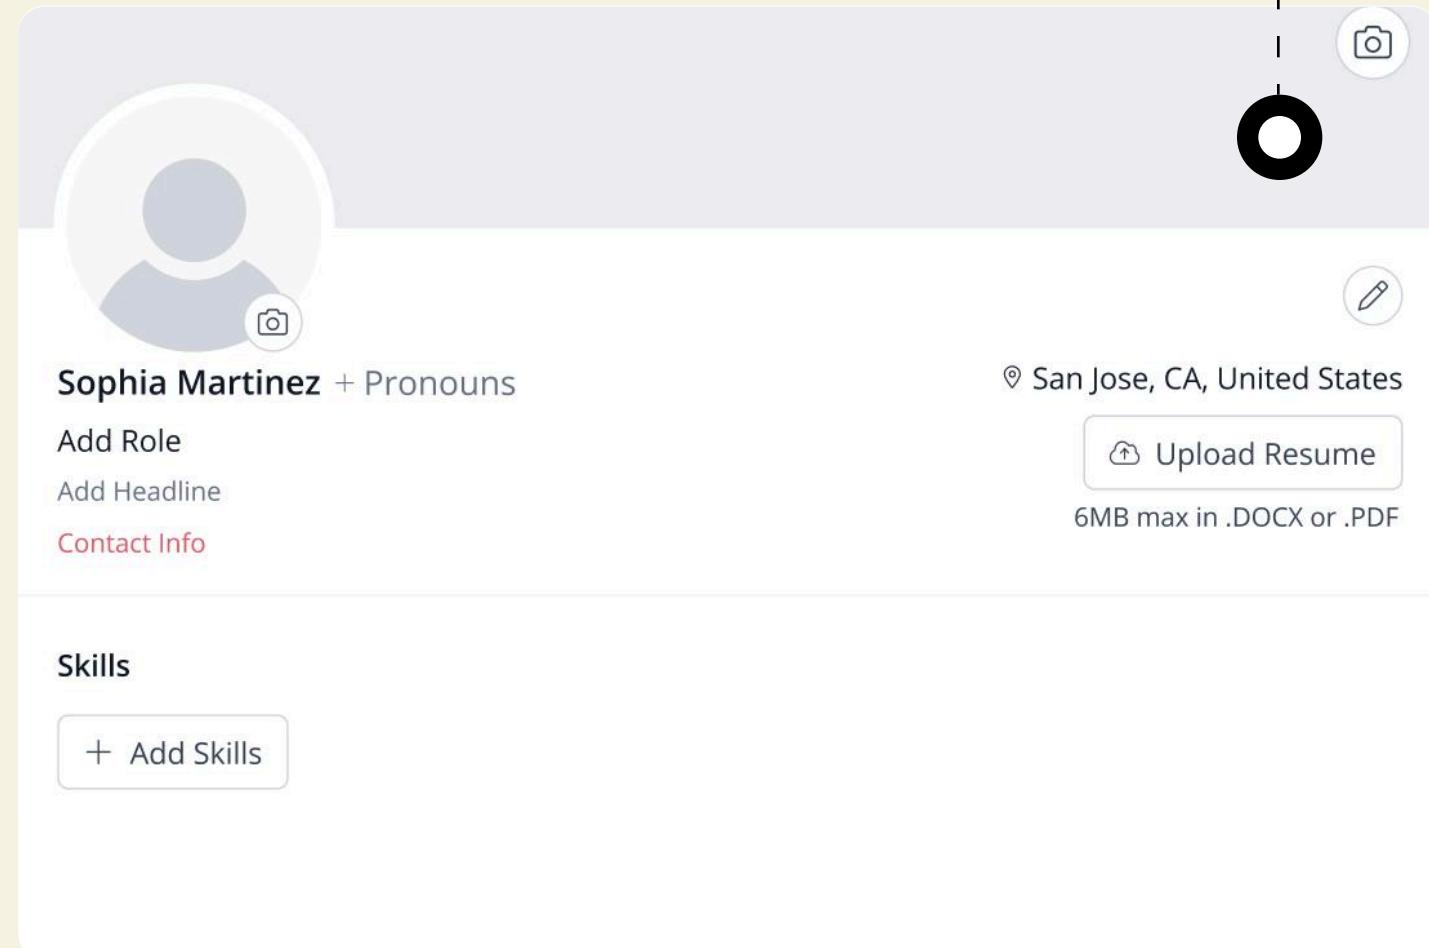

-Kelly, Creative

#Key Insights From Cross-Team Interviews

I met with five colleagues across product, sourcing, events, and engineering. I asked how they worked inside the funnel and how candidate data supported their role.

Low-scored profiles weren't visible to clients

Low-scored profiles never showed in job applications or candidate search, so clients never saw them.

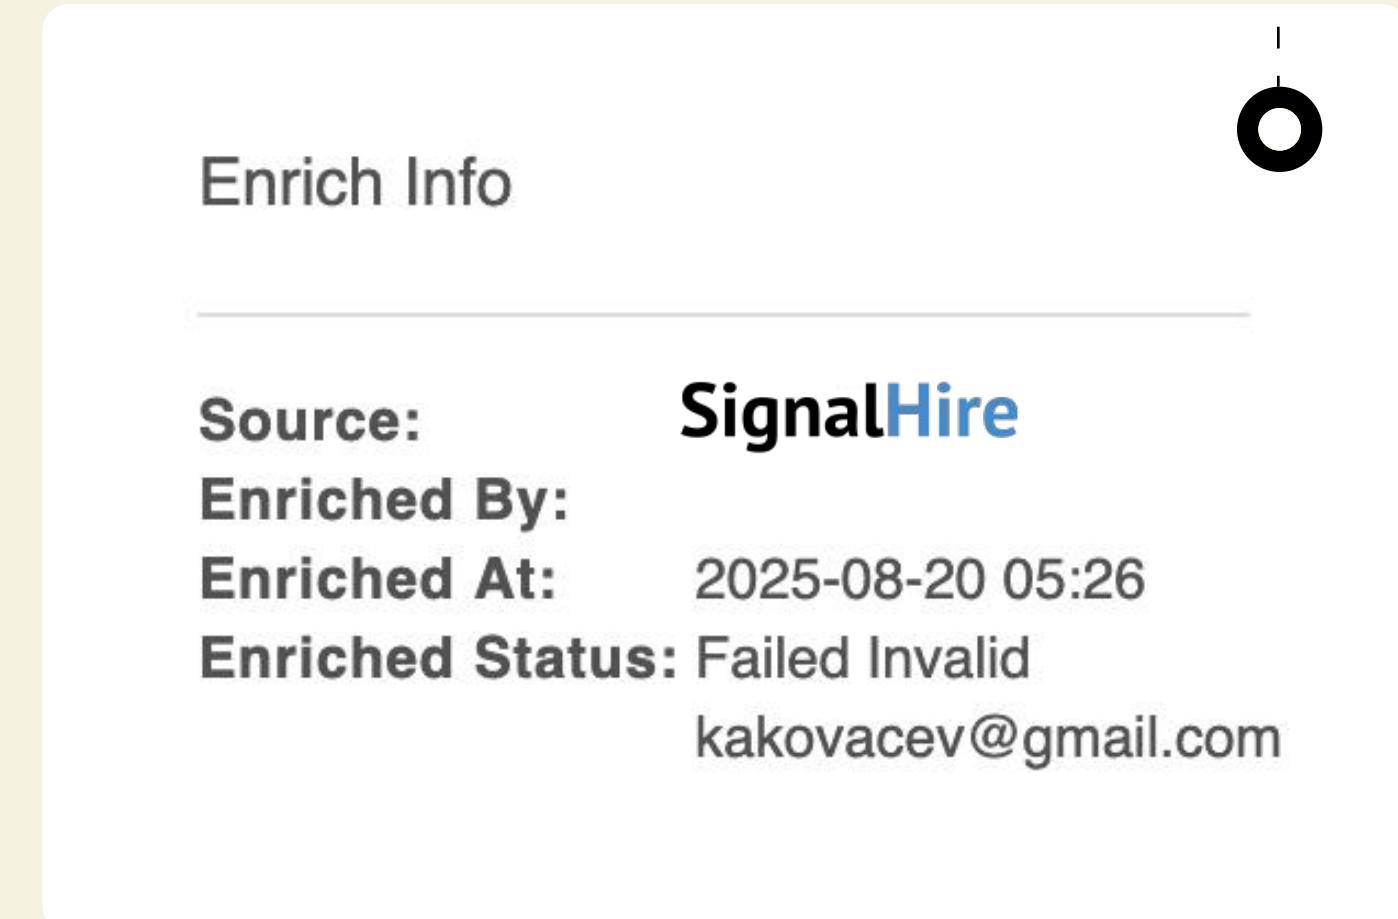

Candidate search feature was unusable

When clients used candidate search, it returned too few results because profiles were low-scored.

We used SignalHire to enrich registrants data post-event.

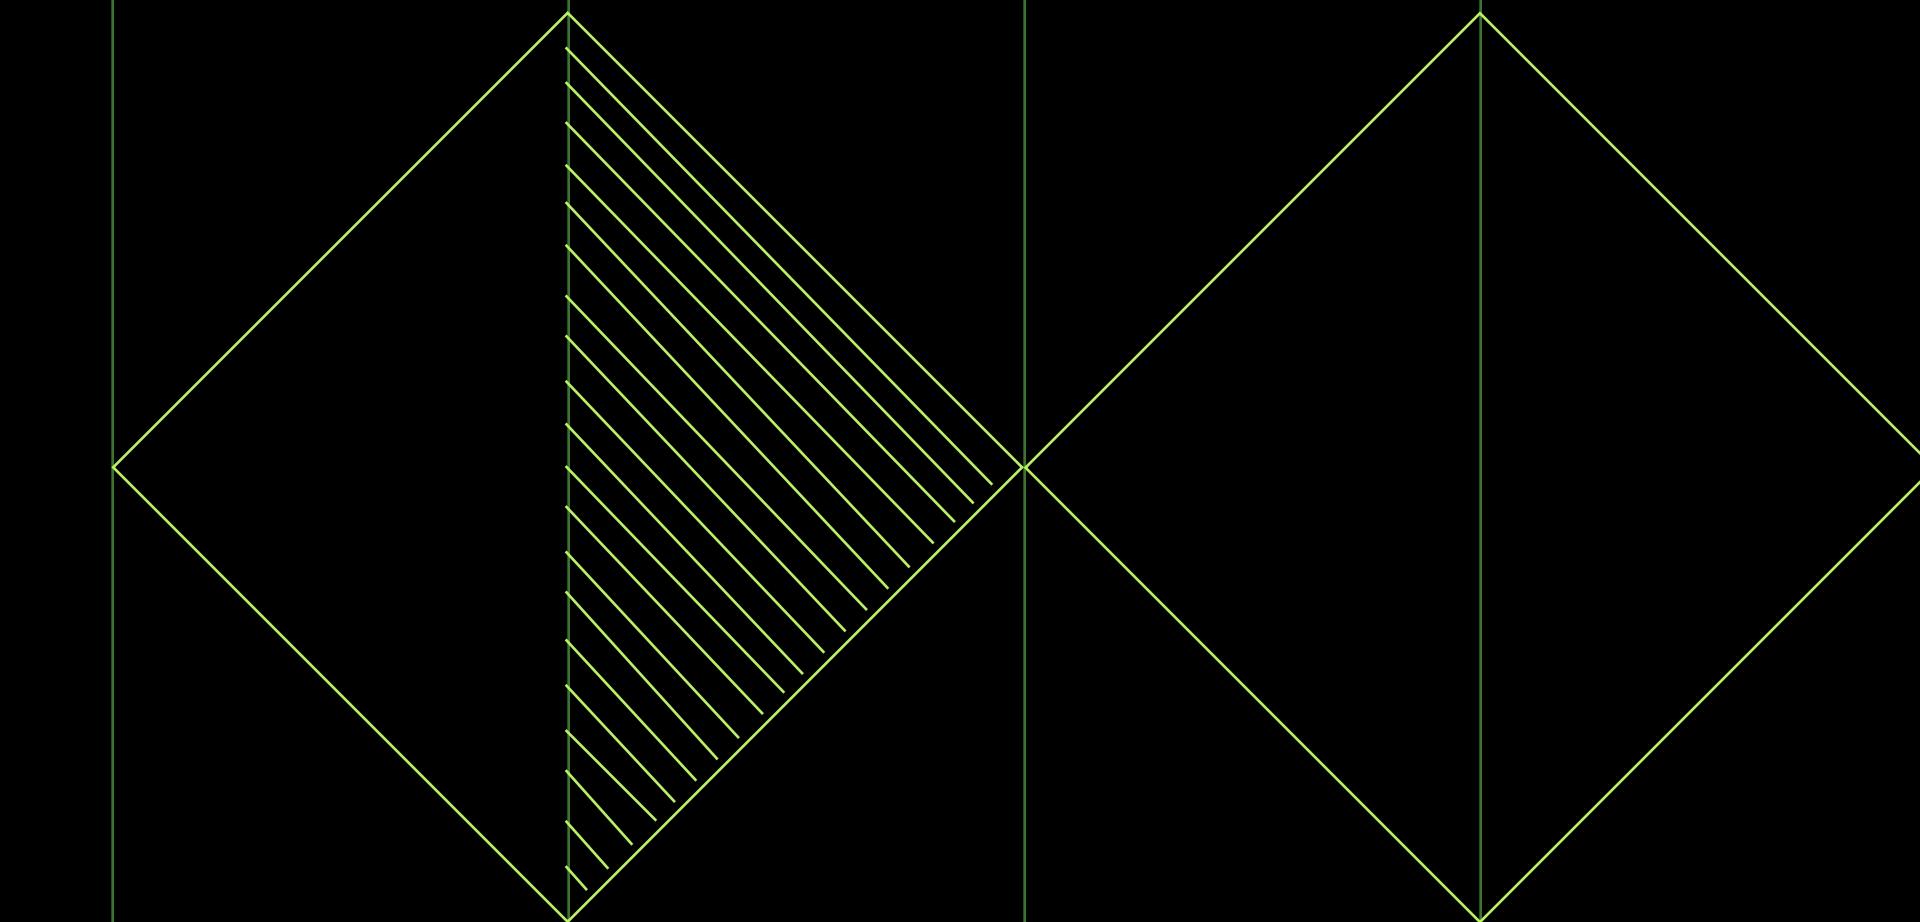

After each event, the team used SignalHire to deliver complete registrant data to clients by manually matching names and emails to LinkedIn profiles.

DEFINE

I pulled together insights from candidates and cross-team stakeholders to uncover systemic issues in how our funnel was designed.

DISCOVER DEFINE DEVELOP DELIVER

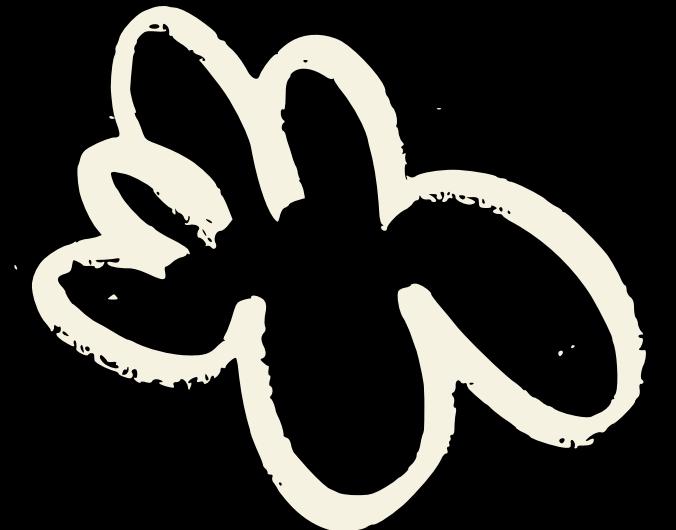

I discovered the system actually had two conflicting flows, each optimized for the wrong outcome

	The Job Application Flow	The Event Registration Flow
Clients wanted	More job applications	Rich registrant data to build a database
Candidates wanted	To apply to many job opportunities fast	To get in front of job opportunities
What we did	<p>ⓘ Optimized for data collection over applications (forced painful profile creation before applying)</p>	<p>ⓘ Optimized for registrations over data quality (frictionless sign-ups, no meaningful data captured)</p>
Result	Low applications + incomplete profiles	High registrations, but poor registrants data

Problem statement

How We Handled Data Collection
Was Breaking the Funnel.

Our data collection was manual-heavy and low-signal:
the jobs flow asked too much upfront and the events
flow captured too little, forcing manual enrichment.

Numbers Don't Lie

95%

of candidates quit applying
during profile creation.

90%

of candidate profiles were
too low-quality to be of use.

100s

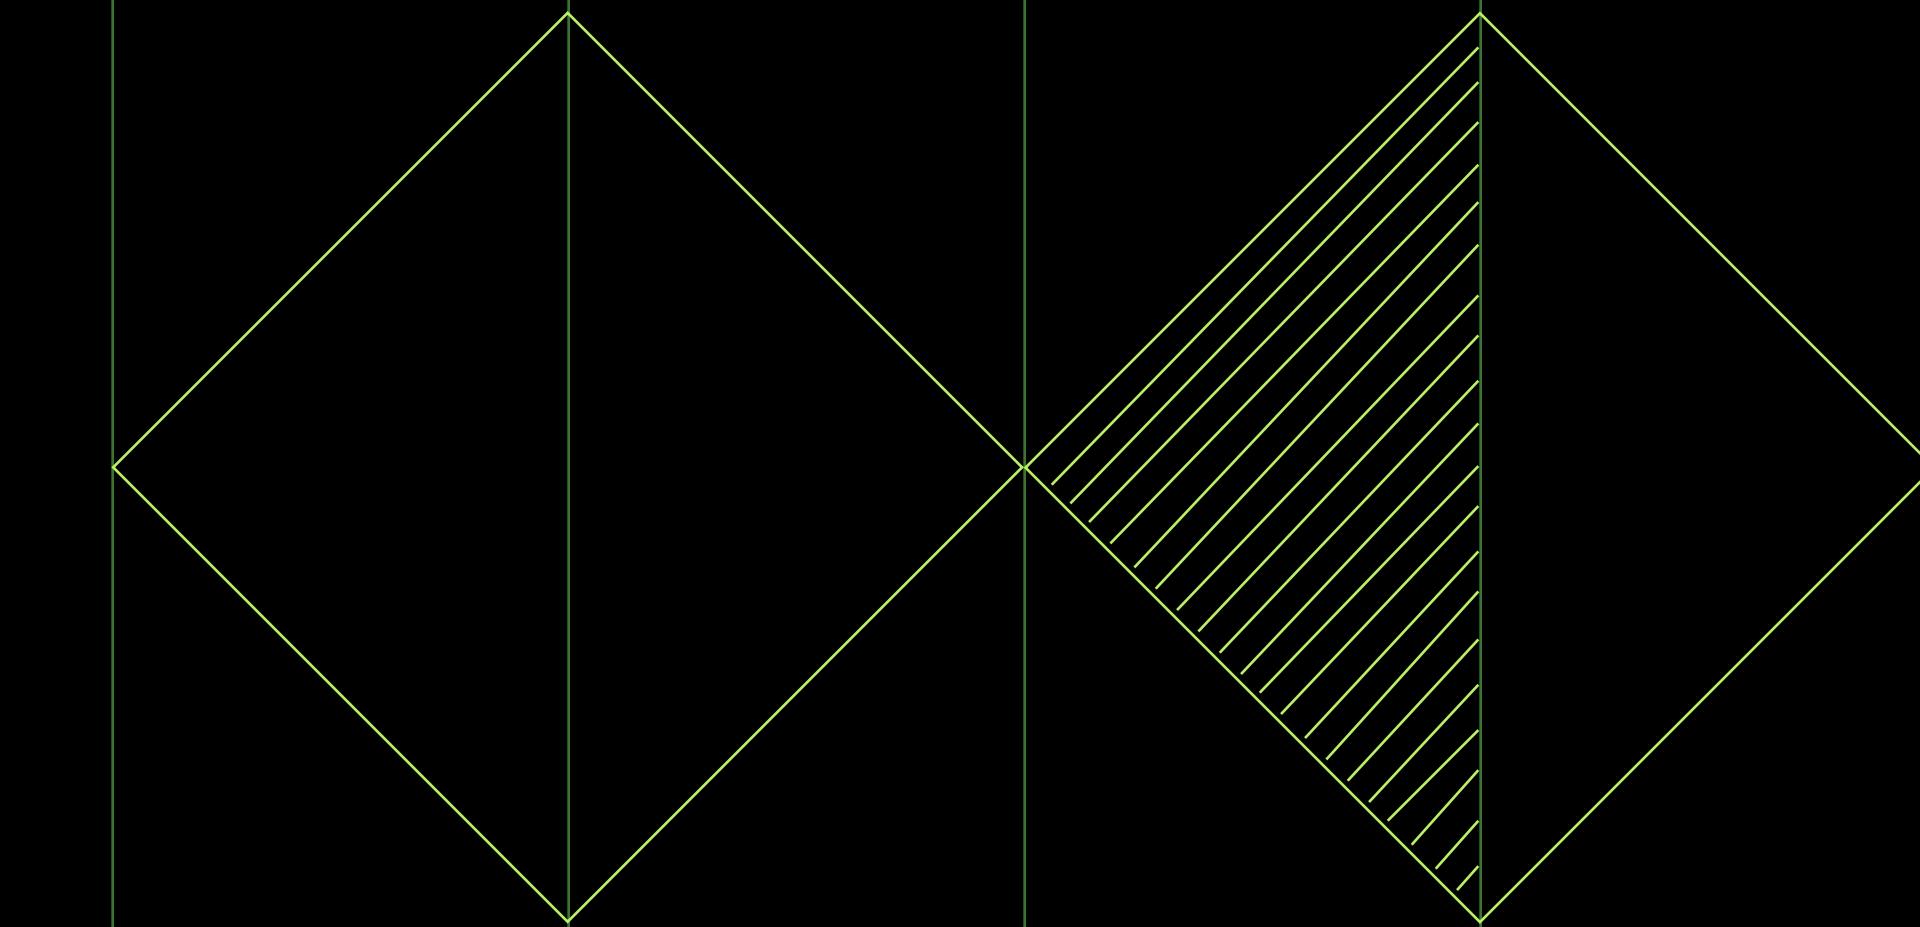

of registrants per event had to be
manually enriched with SignalHire

How might we capture richer candidate data with less friction – without relying on manual work?

DEVELOP

I prototyped and tested new approaches with candidates to explore new ways of capturing richer data while reducing friction in the funnel.

DISCOVER DEFINE DEVELOP DELIVER

Testing the LinkedIn + SignalHire Solution at scale

Technical Feasibility

We were already using SingleHire successfully. The only challenge was that enrichment required manual LinkedIn lookups by the events team.

Financial Feasibility

Budget for SingleHire was approved for higher enrichment volumes expected from job applications.

Operational Feasibility

We needed to capture LinkedIn URLs directly during sign-up or registration, removing manual lookups and enabling automatic enrichment at scale.

Next step: User Feasibility

Need to confirm that candidates are comfortable sharing their LinkedIn upfront.

Experiment #1

LinkedIn ask in the Job Application Flow

Mocked up for testing a quick sign-up modal where new candidates only entered an email and LinkedIn URL before applying to a job. Setting a password came later through an email push.

→ Designed for live A/B testing against historical data.

Start Your Application

The Quick Sign-Up (email + LinkedIn) design.

Experiment #2 → Iteration #1

LinkedIn ask in the Events Flow

Mocked up for testing a flow with profile creation built into event registration. To complete, candidates only needed to add their LinkedIn URL, which then automatically populated their profile.

→ Designed for moderated user testing before live A/B

- Ask only for the LinkedIn URL, using enrichment to pre-fill profiles

- Keep manual completion option for those who prefer it

- Add a "Skip" button so completion is voluntary and measurable

#Key insights

2 live 30-min sessions with active job seekers

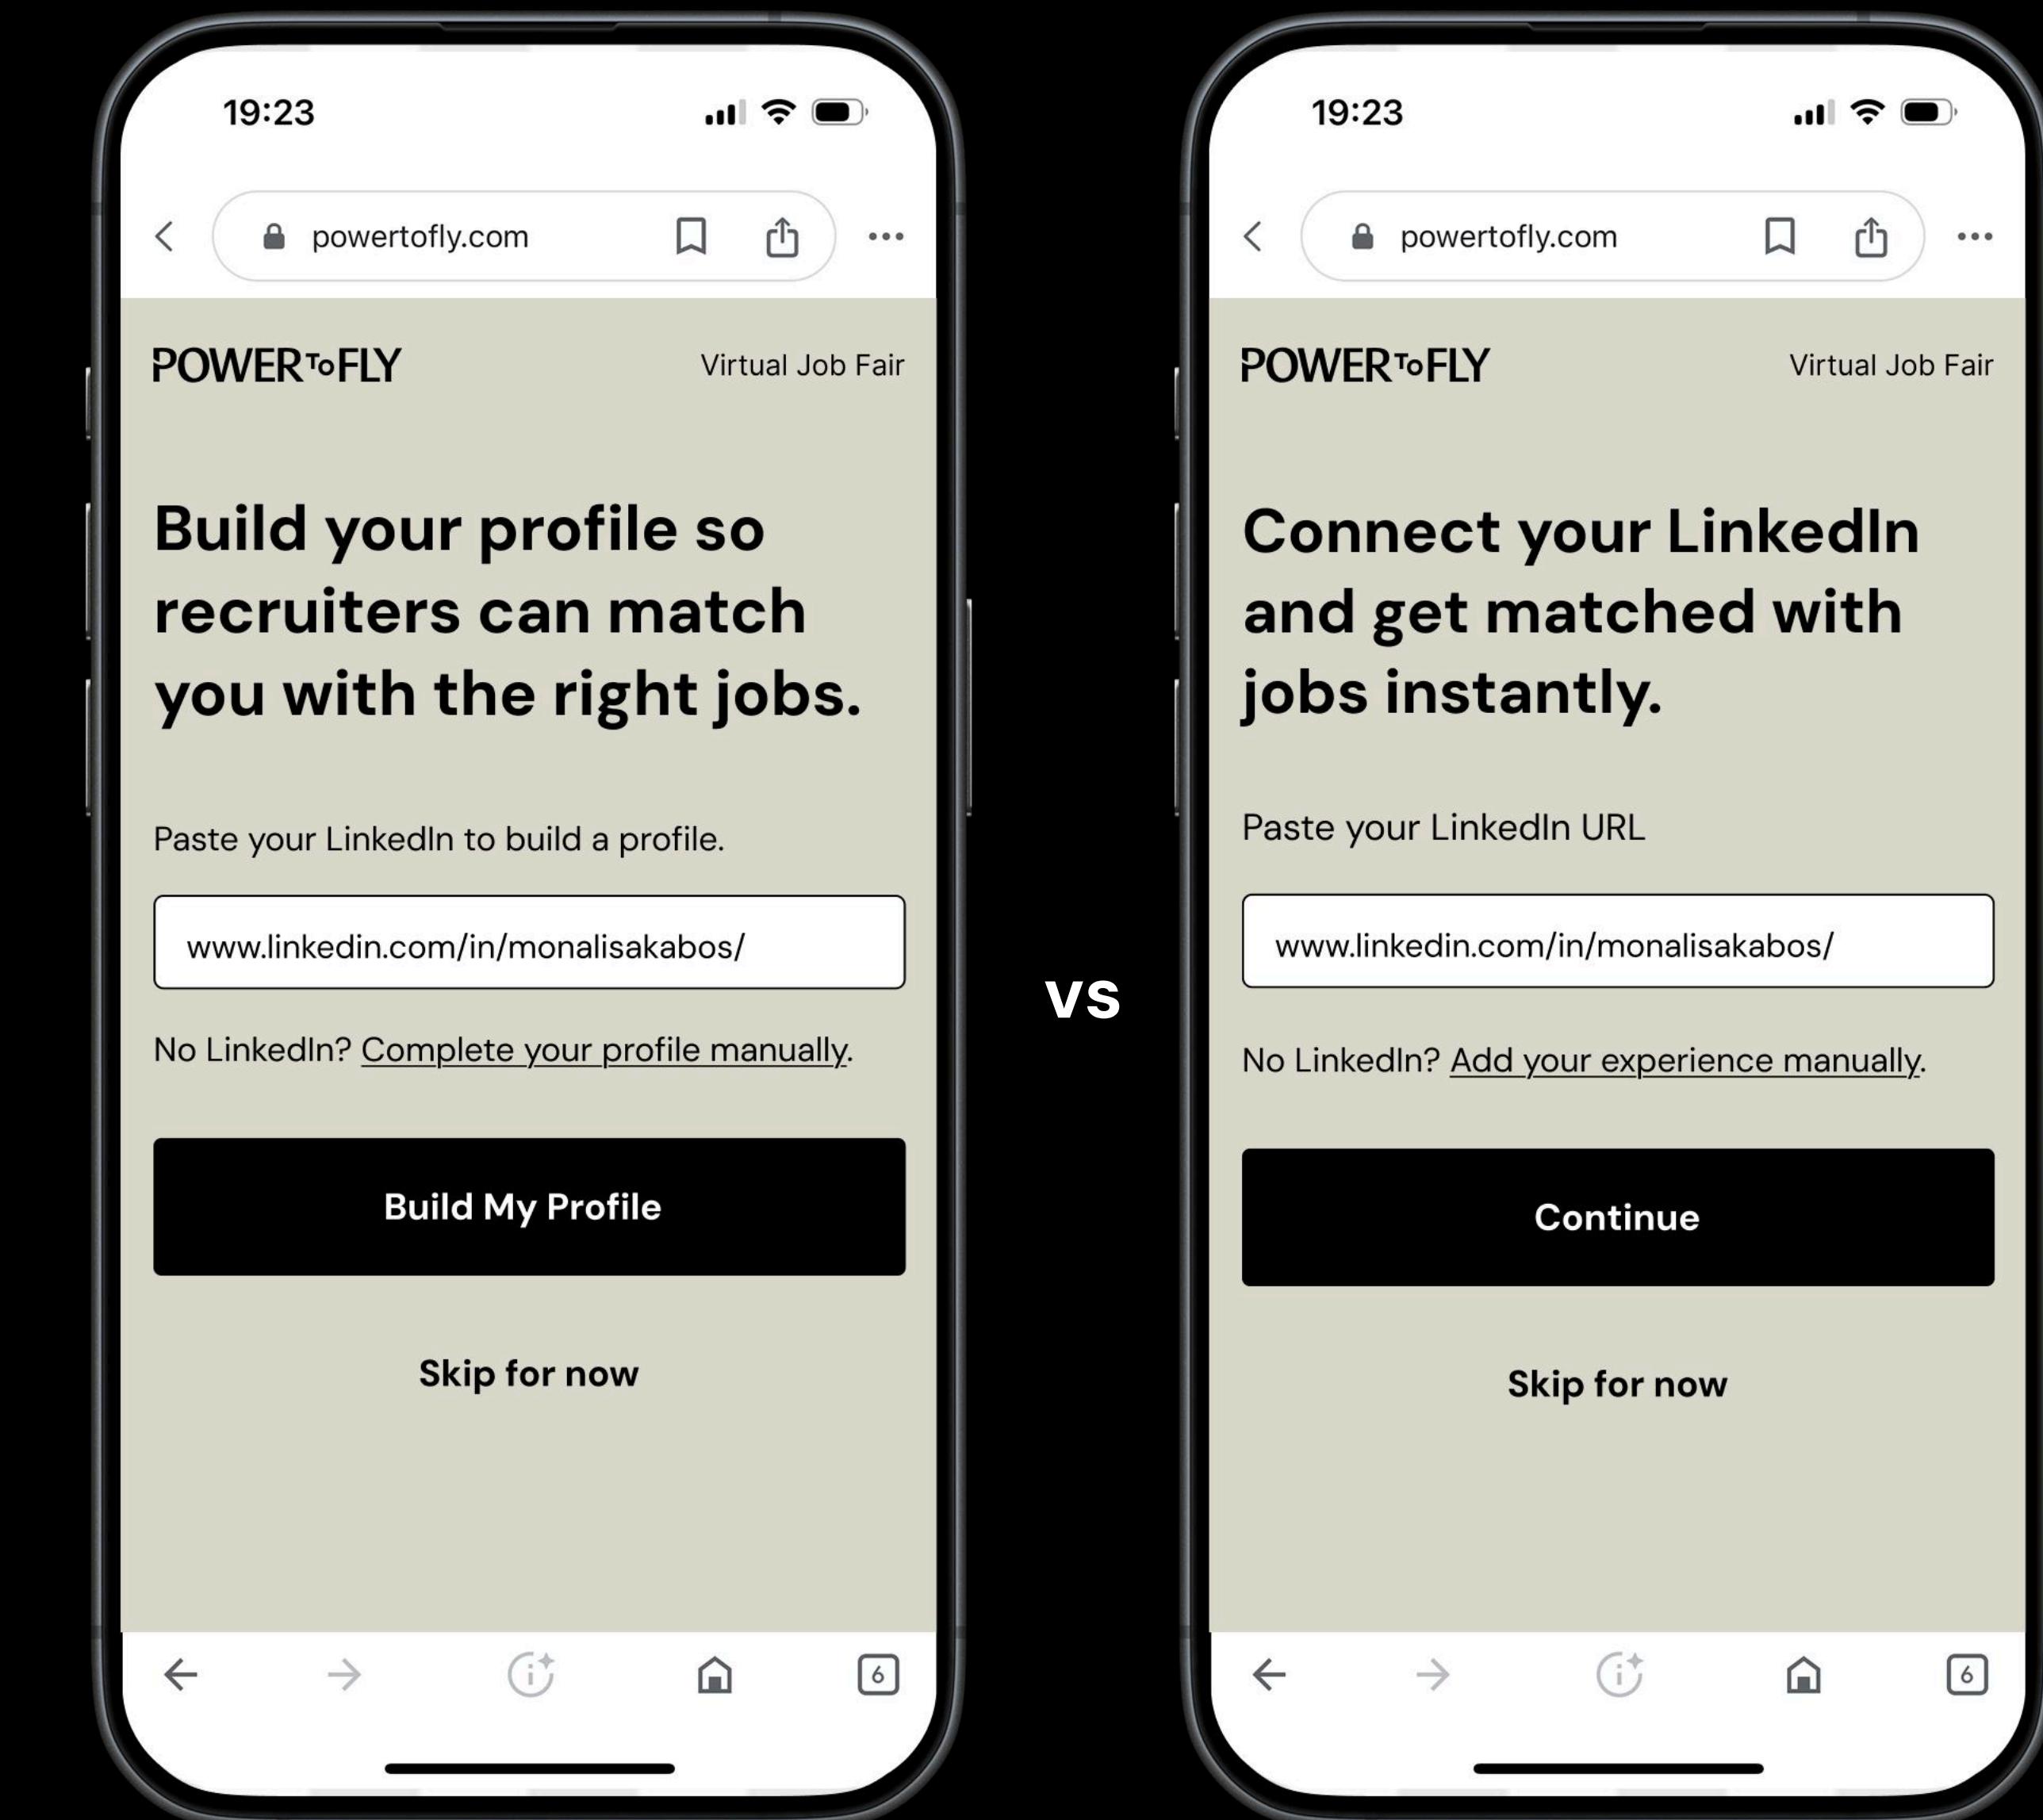

Candidates were open to sharing their LinkedIn YAY. But having profiles didn't feel valuable to them.

I needed to understand why! Was it the copy or the value prop itself that made them feel that way!!??

Experiment 2 → Iteration #2

Do We Even Need Profiles?

I ran a compare-and-contrast test, mocking up two versions of the value prop: one with profiles and one without, to see if users found any value in them.

#Key insights

3 live 30-min sessions with active job seekers

Candidates didn't want another profile to maintain

They preferred to keep LinkedIn as one source of truth, updating it during their job search. Maintaining a second profile with us felt like unnecessary extra work.

"I don't see why I'd need a profile if LinkedIn already has everything."

-Aisha, Finance

I already spend time updating my LinkedIn — I wouldn't bother doing the same somewhere else.

-Diego, Marketing

*Source: Moderated candidate interviews, session testing docs

Strategic Decision: To remove “Profiles” from our value prop

Partnered with the CEO and VP Product to make a strategic shift: retire “profiles” as part of our value prop. While collecting candidate data was essential, positioning it as ‘creating a profile’ added unnecessary friction and no longer aligned with our value proposition — especially after we moved away from the staff augmentation business model.

Supporting data:

75%

of candidates quit at the first profile screen

100%

of users in testing said maintaining a second profile beyond LinkedIn had no value to them.

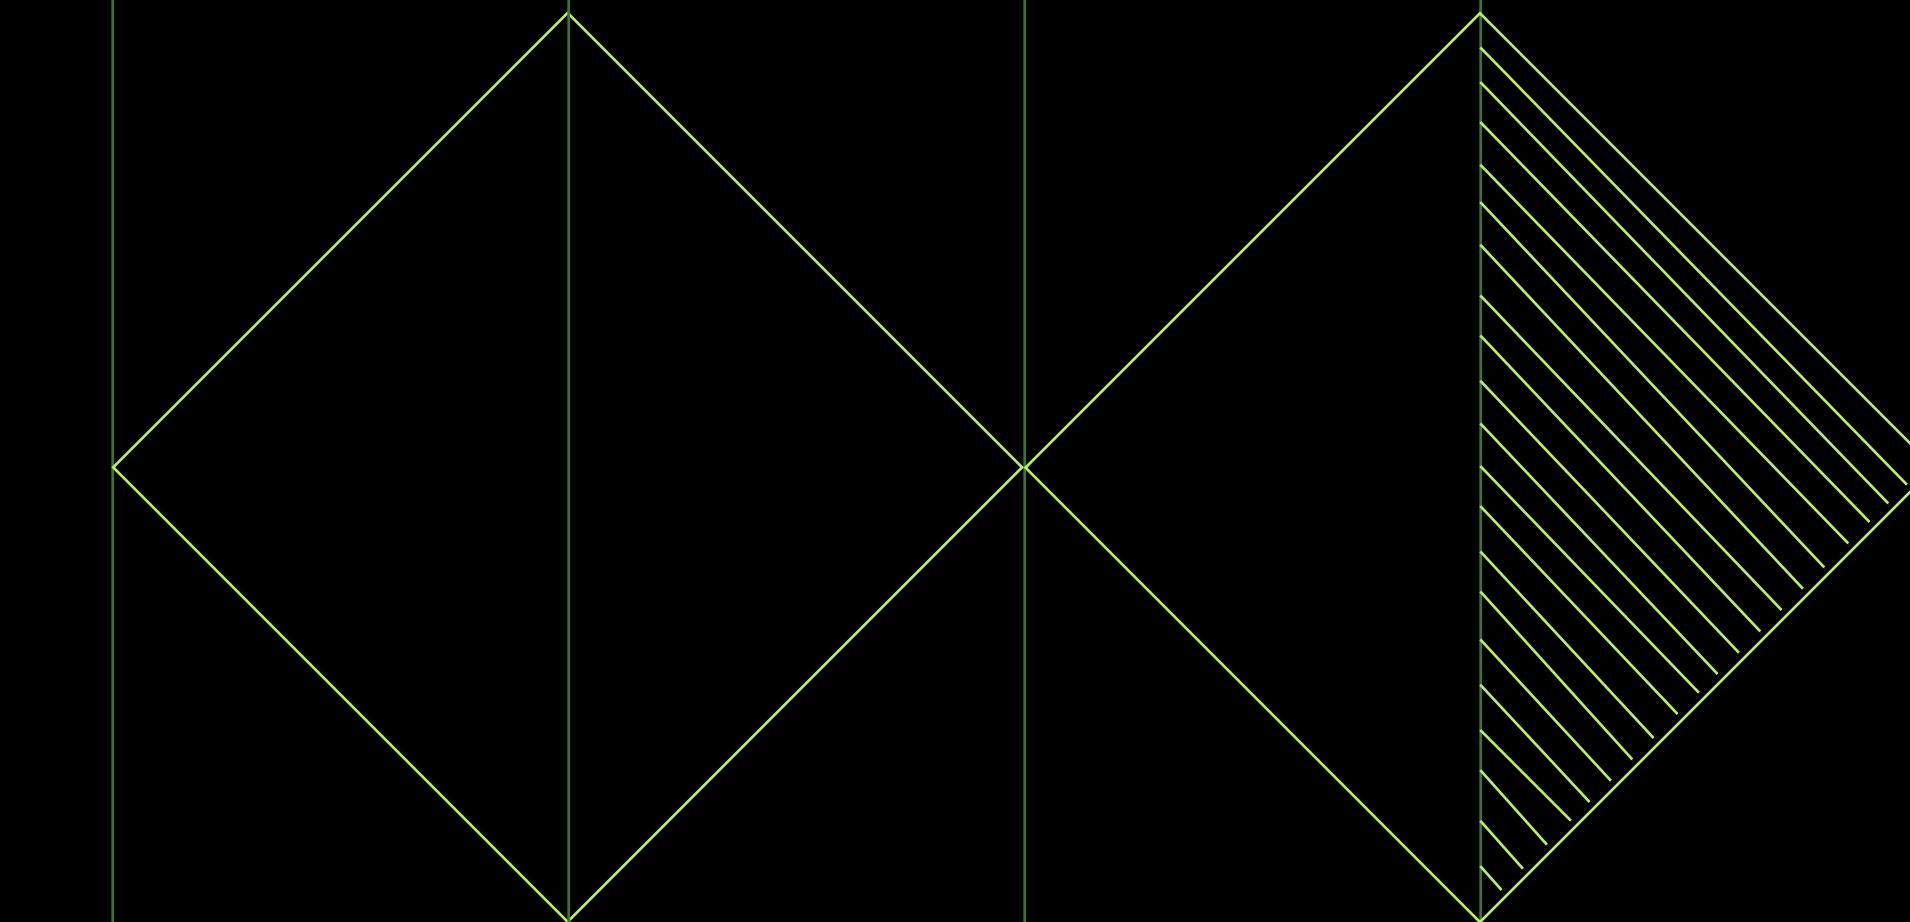

<2%

of candidates ever returned to their profile page after creating it

DELIVER

Partnered with engineering to launch new job application and event flows (A/B tested vs. historical data) and rolled out the new funnel branding, already validated on marketing pages.

DISCOVER DEFINE DEVELOP DELIVER

Jobs Flow Before

- 1 View job
- 2 Click "Apply"
- 3 Create account
- 4 Create profile
- 5 Apply on client website

The figure consists of five screenshots arranged in a grid, illustrating the 'Profile Creation Wizard' in the 'Jobs Flow Before' state. The screenshots show the progression from account creation to a completed profile.

- Screenshot 1: Account Creation**

Shows a success message: "Hello lizu, your account was created successfully!". It includes a file upload section for a resume template (.pdf) and a manual profile completion button.
- Screenshot 2: Profile Creation Step 1**

Shows a file upload error for "Copie a Resume Template 1_.pdf": "Error uploading the file. Something went wrong". It includes a manual profile completion button.
- Screenshot 3: Profile Creation Step 2**

Shows the "Work Experience" section with one entry: "MTV 2010 Oversaw digital integrated marketing...". It includes an "Add Experience" button and a manual profile completion button.
- Screenshot 4: Profile Creation Step 3**

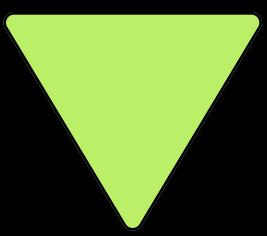

Shows the "Tell us about yourself" section with fields for Headline (containing "test"), Pronouns (set to "she"), and Location (United States, Arkansas, Alexander). It includes a manual profile completion button.
- Screenshot 5: Profile Creation Step 4**

Shows the final step of the wizard, indicating 4 of 4 steps completed. It includes a "Save and Continue" button.

Screens from Profile Creation Wizard in the job application flow.

Jobs Flow

After

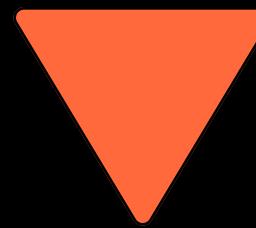

- ① View job
- ② Click "Apply"
- ② Quick Sign-up New
Modal
- ③ Apply on client website
- ④ Email Push New
to account completion

The image displays two mobile device screenshots. The left screenshot shows a job search interface with a modal overlay titled 'Start Your Application'. The modal asks for an email address to apply and includes a 'Continue to Apply' button. The right screenshot shows an email inbox with a PowerToFly notification from 'PowerToFly' dated '22 Aug' with the subject 'Welcome Just one more step to complete your account'. The email body instructs the user to create a password to access their profile and provides options to 'Set up your password' or 'Unsubscribe Manage preferences'.

Quick Sign-Up Modal and Email Push to account completion in the job application flow.

Events Flow

Before

- ① View event
- ② Click "Register"
- ③ Create account
- ④ Career questions
- ⑤ Finish registration

- ④ LinkedIn ask New
- ⑤ Finish registration

New designs from the events registration flow with LinkedIn ask.

Impact

Doubled job applications within one quarter.

Drop-off at the application gate fell from ~95% to <25%.

Enriched candidate data at scale via LinkedIn + SignalHire.

Aligned business goals & user needs by removing 'profiles' value prop.

Directly contributed to \$1.2M+ in renewals.
