THE FUNNEL FIX

From Broken Journeys to
High-Conversion & High-Data Flows

My challenge

The funnel had been stitched together over time with no documentation, key team members had left the company, and data tracking was missing or broken.

The beauty of this project lies in how I put my PM hat on and used my design tools to map all the learnings — aligning the company around how the whole system worked.

I found tradeoff opportunities the leadership agreed on and built experiments, adapting both the solutions and testing methods to keep things moving fast.

Overview

PowerToFly is a leading hiring platform with 10,000+ partner companies and millions of candidates, focused on connecting underrepresented talent with inclusive companies through job applications and virtual events.

My Role

As Staff Product Designer & PM, I owned the funnel redesign end to end, from discovery to strategy to execution, collaborating with engineering, sourcing, events, data analysts, and executives.

Business Goals

More Job Applications

Increase job application to provide clients with a larger, more qualified pool of candidates to hire from.

DISCOVER

When I joined, past funnel decisions and user insights weren't documented. My discovery started with restoring funnel knowledge.

#Key Insights From Candidates Interviews

I interviewed active job seekers from our most recent virtual event. Each 30-minute session covered their daily struggles with job searching, followed by a live walkthrough of applying on our job board.

They were highly qualified, but struggling to get traction

For the first time in their careers, they were having a hard time putting their foot in the door. -----

“I’ve always landed roles, but now I can’t even get interviews.”

–Kim, Business

“Job searching feels like a second job I don't have time for.”

–Toncia, Finance

They were under daily pressure to find job -----

They needed to hit ~10 job applications a day while juggling jobs they weren’t happy in, childcare, or unemployment.

They had a hard time creating a profile before applying

They were annoyed by the whole experience and weren’t sure what value having a profile would bring to them. -----

“I would normally skip a step like this and come back to it later.”

–Kelly, Creative

#Key Insights From Cross-Team Interviews

I met with colleagues across product, sourcing, events, and engineering. I asked how they worked inside the funnel and how candidate data supported their role.

Low-scored profiles weren't visible to clients

Low-scored profiles never showed in job applications or candidate search, so clients never saw them.

Sorry!

We don't have any candidates that match your criteria. Try expanding your search by adjusting or removing some filters.

Reset Search ↺

Candidate search feature was unusable

When clients used candidate search, it returned too few results because profiles were low-scored.

We used SignalHire to enrich registrants data post-event.

After each event, the team used SignalHire to deliver complete registrant data to clients by manually matching names and emails to LinkedIn profiles.

DEFINE

I pulled together insights from candidates and cross-team stakeholders and uncovered systemic issues in how our funnel was designed.

I discovered the two main flows in the funnel were optimized for the wrong outcome.

	The Job Application Flow	The Event Registration Flow
Clients wanted	More job applications	Rich registrant data to build a database
Candidates wanted	To apply to many job opportunities fast	To get in front of job opportunities
What we did	Optimized for data collection over applications (forced painful profile creation before applying)	Optimized for registrations over data quality (frictionless sign-ups, no meaningful data captured)
Result	Low applications + incomplete profiles	High registrations, but poor registrants data

Root Problem

How We Handled Data Collection Was Breaking the Funnel.

Our data collection was manual-heavy and low-signal:
the jobs flow asked too much upfront and the events
flow captured too little, forcing manual enrichment.

Numbers Don't Lie

95%

of candidates quit applying during profile creation.

90%

of candidate profiles were too low-quality to be of use.

100s

of registrants per event had to be manually enriched with SignalHire

How might we capture rich
candidate data with less
friction in our funnel?

DEVELOP

I prototyped and tested new approaches with candidates to explore new ways of capturing richer data while reducing friction in the funnel.

Testing the SignalHire Solution at scale

☒ Technical Feasibility

We were already using SignalHire successfully. The only challenge was that enrichment required manual LinkedIn lookups by the events team

☒ Operational Feasibility

We needed to capture LinkedIn URLs directly during sign-up or registration, removing manual lookups and enabling automatic enrichment at scale.

☒ Financial Feasibility

Budget for SingleHire was approved for higher enrichment volumes expected from job applications.

☐ Next step: User Feasibility

Need to confirm that candidates are comfortable sharing their LinkedIn upfront.

Experiment #1

LinkedIn ask in the Job Application Flow

Mocked up for testing a quick sign-up modal where new candidates only entered an email and LinkedIn URL before applying to a job. Setting a password came later through an email push.

→ Designed for live A/B testing against historical data.

The Quick Sign-Up (email + LinkedIn) design.

Experiment #2 → Iteration #1

LinkedIn ask in the Events Flow

Mocked up for testing a flow with profile creation built into event registration. To complete, candidates only needed to add their LinkedIn URL, which then automatically populated their profile.

→ Designed for moderated user testing before live A/B

Ask only for the LinkedIn URL, using enrichment to pre-fill profiles

Keep manual completion option for those who prefer it

Add a “Skip” button so completion is voluntary and measurable

LinkedIn integration concept for user testing.

#Key insights

2 live 30-min sessions with active job seekers

Candidates were open to sharing their LinkedIn YAY. But having profiles didn't feel valuable to them.

I needed to understand why! Was it the copy or the value prop itself that made them feel that way?

Experiment 2 → Iteration #2

Do We Even Need Profiles?

I ran a compare-and-contrast test, mocking up two versions of the value prop: one with profiles and one without, to see if users found any value in them.

Prototype with profile value prop

VS

Prototype with data collection only

#Key insights

3 live 30-min sessions with active job seekers

Candidates didn't want another profile to maintain

They preferred to keep LinkedIn as one source of truth, updating it during their job search. Maintaining a second profile with us felt like unnecessary extra work.

"I don't see why I'd need a profile if LinkedIn already has everything."

–Aisha, Finance

I already spend time updating my LinkedIn — I wouldn't bother doing the same somewhere else.

–Diego, Marketing

*Source: Moderated candidate interviews, session testing docs

Strategic Decision: To remove “Profiles” from our value prop

Partnered with the CEO and VP Product to make a strategic shift: retire “profiles” as part of our value prop. While collecting candidate data was essential, positioning it as ‘creating a profile’ added unnecessary friction and no longer aligned with our value proposition — especially after we moved away from the staff augmentation business model.

Supporting data:

75%

of candidates quit at the first profile screen

100%

of users in testing said maintaining a second profile beyond LinkedIn had no value to them.

<2%

of candidates ever returned to their profile page after creating it

DELIVER

Partnered with engineering to launch new job application and event flows (A/B tested vs. historical data) and rolled out the new funnel branding, already validated on marketing pages.

Jobs Flow Before

- 1 View job
- 2 Click "Apply"
- 3 Create account
- 4 Create profile
- 5 Apply on client website

Event registration Step 3 of 3

You're all set!

See you at the Virtual Job Fair on February 5th at 10:00 AM (local time). Don't miss it!

Add event to calendar

I'll add it later

New designs from the events registration flow with LinkedIn ask.

Impact

Doubled job applications within one quarter.

Drop-off at the application gate fell from ~95% to <25%.

Enriched candidate data at scale via LinkedIn + SignalHire.

Aligned business goals & user needs by removing 'profiles' value prop.

Directly contributed to \$1.2M+ in renewals.
